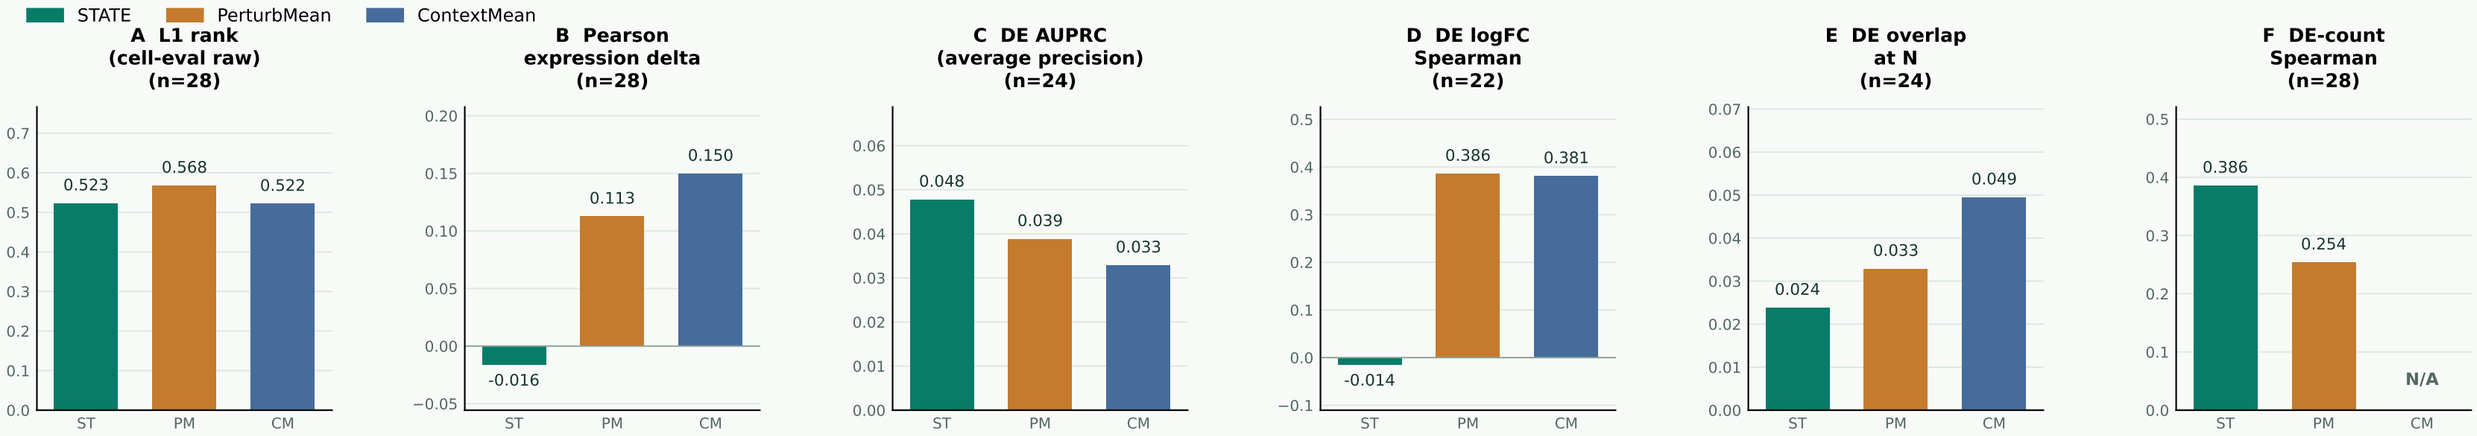
EPI-C3 / EXPLORATORY PILOT / 2026-11-13

STATE and mean baselines on one held-out RPE1 split

Two cell lines; 40 targets; 28 test perturbations. Not the paper benchmark or Epi-C3 models.



Bars are equally weighted means over common valid conditions, except DE-count Spearman (one correlation across 28 conditions). N/A = undefined; no uncertainty bars; panel axes differ.

STATE: random initialization, 512 CPU steps. Repeated predictions and clipping limit DE inference.
